Ticket Booking - Amendment Implementation Report

Transport-Jaan | Amendments of 07 October 2026 | Prepared 2026-10-29

Overview

The Ticket Booking amendments of 07 October 2026 are implemented for Air, Bus & Train and Sea. This report lists each change made in the system.

Source documents: Ticket Booking Air October 07 Amend 1; Ticket Booking Bus & Train October 07 Amend 1; Ticket Booking Sea October 07 Amend 1; Category and sub category Air; category and sub category for sea.

How it was checked: the frontend builds without errors. The flight and bus pages were opened and used in a browser. Sea requests were tested against the validation rules: a valid request is stored, and a bad NIC, a sub-category from another category, a return trip without a return date and a past date are rejected. The train class filter was checked on a Colombo to Kandy route: any class returns 4 trips, Luxury A/C 3 and Semi Luxury 1.

Air ticket booking

Air categories and sub-categories

The flight request form has a category then sub-category picker: Scheduled Flights, Charter Flights, Seaplane, Helicopter and Other Air Passenger Services, with 17 sub-categories. Both choices are saved with the request and fill the subject.

Remove the "adult economy" option

The cabin class choice and the "1 Adult, Economy" summary are removed from the flight search. The summary now reads, for example, "1 Adult, 2 Youth, Student".

Return option in the search bar

The flight search offers Return, One way and Multi-city, with a return date.

Passenger details as in the picture

The field is now labelled "Passengers". Its popup has Adults (18-59), Youth (0-17) and Seniors (60+) counters, Student and Wheelchair toggles, and a Done button.

NIC number in passenger details

NIC is required on the flight request form (9 digits plus V or X, or 12 digits).

Bus and train ticket booking

Passenger adding as in the picture

Bus and train search use the passenger panel: Adults (18-59), Youth (0-17), Seniors (60+), Students and Wheelchair. The age bands match the picture.

Remove the map at the top and move the side map to the top

The small route map inside each bus and train result card is removed. On the bus and train trip pages the side map is removed and the route map now sits at the top of the page, under the search card.

NIC number in passenger details

Bus and train passenger forms ask for the NIC. It is required, validated and saved on the booking.

Fetch customer details into the profile, including NIC

Profile settings has Birthday and NIC. Booking forms pre-fill name, email, phone and NIC from the profile. A NIC entered on a booking is saved to the profile if it was empty.

Train: add passenger class

Train search has a Passenger class choice: Luxury A/C, Semi Luxury, 1st Class, 2nd Class or any. Results are filtered by it and the class is saved on the booking.

Sea ticket booking

Sea categories and sub-categories

A new Sea tab and page (/seaTicketBooking) has the category and sub-category picker: Ferry, Cruise, Boat & Water Transfer and Yacht & Experiences, with 21 sub-categories and the explanatory notes from the document.

Sea ticket booking

Sea tickets are request-based, like flights. The customer sends route, dates, passengers and NIC. The request is stored in a new table, sea_ticket_requests, with status pending for the team to quote.

NIC number in sea passenger details

NIC is required on the sea request form.

Sea tab on every ticket page

The Bus, Train, Flight and Sea tabs appear on every ticket booking page.

Files and data changed

- **Database:** NIC on bus, train and flight bookings; train passenger class; air category and sub-category on flight bookings; new sea_ticket_requests table.
- **Backend:** BusBookingController and TrainController (NIC required, saved to the profile, train class filter and saved class); FlightBookingController and StoreFlightBookingRequest; new SeaTicketRequestController and SeaTicketRequest model; ClientSettingsController (NIC on the profile); App\Support\ProfileIdentity; routes.
- **Frontend:** bus and train passenger forms and cards; trip pages with the map at the top; SkyscannerFlightHero (Passengers popup, cabin class removed); flight request form; new Sea ticket page; ticket tabs; profile settings; shared category picker and constants/ticketCategories.js.
