Ticket Booking - amendments implemented

Prepared 2026-10-23 from the documents in the `transport/` folder. It records what was changed in the system for each point, what was already there, and what is still open.

Source documents: Ticket Booking Air October 07 amend 1.pdf; Ticket Booking Bus & Train October 07 Amend 1.pdf; Ticket Booking Sea October 07 Amend 1.pdf; Category and sub category Air.txt; category and sub category for sea.txt

Overall: 8 Done 3 Already there 1 Partly 1 Not done 1 Needs check

Air (2 Done 1 Already there 1 Partly 1 Not done)

#	Requirement (from the document)	Status	What was done / where
1	Air categories and sub-categories (Scheduled Flights, Charter Flights, Seaplane, Helicopter, Other Air Passenger Services, with their sub-categories)	Done	The flight request form has a category then sub-category picker (all 5 categories, 17 sub-categories). Both are saved with the request and fill the subject.
2	Remove 'adult economy' option; add a 'return' option to the search bar	Already there	The flight search already has a Return / One way / Multi-city choice and a return date.
3	Passenger details as in the picture (adult / youth / senior counts, student and wheelchair)	Partly	The flight search keeps its own travellers panel. Bus and train use the panel from the picture; its age bands now read 18-59, 0-17 and 60+. Choosing which adults use a wheelchair is not built.
4	Change the front-view picture, the points cannot be seen	Not done	Needs a replacement image from the client.
5	NIC number in passenger details	Done	Required on the flight request form (9 digits + V/X, or 12 digits).

Land (bus and train) (2 Already there 1 Needs check 3 Done)

#	Requirement (from the document)	Status	What was done / where
1	Bus and train switch, compared with the land category	Already there	Bus, Train, Flight (and now Sea) tabs exist on every ticket page, and bus and train results already offer 'compare with the other mode'.
2	Passenger adding process as in the second image	Already there	Bus and train search use the passenger panel (adults, youth, seniors, students, wheelchair). Age bands were corrected to match the picture.
3	Remove the map at the top and move the side map to the top	Needs check	The route map exists on the search card and trip pages. It is not clear which map should move; please point at the page.
4	NIC number added to passenger details (land)	Done	Bus and train passenger forms ask for the NIC (required, validated, saved on the booking).
5	Fetch customer details into the profile, including NIC	Done	Profile settings now has Birthday and NIC. Booking forms pre-fill name, email, phone and NIC from the profile, and a NIC given on a booking is saved to the profile if it was empty.
6	Train: add passenger class	Done	Train search has a Passenger class choice (Luxury A/C, Semi Luxury, 1st Class, 2nd Class, or any). Results are filtered by it and the class is saved on the booking.

Sea (3 Done)

#	Requirement (from the document)	Status	What was done / where
1	Sea categories and sub-categories (Ferry, Cruise, Boat & Water Transfer, Yacht & Experiences, with sub-types)	Done	New Sea tab and page (/seaTicketBooking) with the category and sub-category picker (4 categories, 21 sub-categories) and the explanatory notes from the document.
2	Sea ticket booking itself	Done	Request-based, like flights: the customer sends route, dates, passengers and NIC; it is stored (new table sea_ticket_requests) with status pending for the team to quote.

#	Requirement (from the document)	Status	What was done / where
3	NIC number in sea passenger details	**Done**	Required on the sea request form.

Files changed

- **Database (1 migration for these):** NIC on bus, train and flight bookings; train passenger class; air category and sub-category on flight bookings; new sea_ticket_requests table.
- **Backend:** BusBookingController and TrainController (NIC required, saved to the profile, train class filter and saved class), FlightBookingController and StoreFlightBookingRequest, new SeaTicketRequestController and SeaTicketRequest model, ClientSettingsController (NIC on the profile), App\Support\ProfileIdentity, routes.
- **Frontend:** bus and train passenger forms, train search card, passenger panel, flight request form, new Sea ticket page, ticket tabs, profile settings, shared category picker and constants/ticketCategories.js.

How it was checked

- A full production build of the frontend completes without errors, and each changed page compiles; the new Sea page and the flight page load.
- Sea requests were tested against the validation inside a rolled-back transaction: a valid request (new or old NIC format) is stored and the NIC is saved to the profile; a bad NIC, a sub-category from another category, a return trip without a return date and a past date are all rejected. Nothing was left in the database.
- The train class filter was checked on a Colombo to Kandy route: any class returns 4 trips, Luxury A/C 3, Semi Luxury 1, and an unknown class 0.
- **Not tested:** submitting the bus, train or flight forms in a browser, and the PHP test suite (not run because its database settings are not separate from the dev database).

Open items and decisions needed

- Decisions or input needed: the replacement front-view image for the flight page; which map to move on the bus and train pages; whether the team needs an admin screen to list and answer sea ticket requests (none exists yet, the same as for flights).
- Wheelchair selection per adult (shown in the picture) is not built; the panel records only that a wheelchair is needed.
- NIC is required on every ticket form. Foreign passengers without an NIC would need a passport option; tell us if that is needed.
