Vehicle Rental - amendments implemented

Prepared 2026-10-23 from the documents in the `transport/` folder. It records what was changed in the system for each point, what was already there, and what is still open.

Source documents: Vehicle Rental Land 07 October amend 1.pdf; Vehicle Rental Air 07 October Amend 1.pdf; Vehicle Rental Sea 07 October Amend 1.pdf; Vehicle Type.txt (sea); Vehicle type air.txt

Overall: 11 Needs check 5 Not done 18 Done 5 Already there

Land (5 Needs check 5 Not done 8 Done 3 Already there)

#	Requirement (from the document)	Status	What was done / where
1	Pickup / drop-off location fetched from Google Maps	Needs check	Existing map and location search were not changed. Needs a look in a browser with the Google key to confirm.
2	Location-based currency	Not done	The wording is unclear (currency by customer location, or by vehicle location?). Needs a decision.
3	Without driver: island-wide access. With driver: province-wise access	Not done	Needs a rule that checks pickup and drop-off are in the same province when a driver is chosen, plus a location-to-province mapping.
4	Location dropdown does not appear when searching	Needs check	Not changed. The code path was not reproduced by reading; test in a browser.
5	Add ID number, licence number, licence expiry date	Done	Checkout now asks for NIC number, driving licence number and licence expiry. Licence details are required for self-drive and the expiry must be in the future. Stored on the booking customer (new columns).
6	Map is still not showing	Needs check	Not changed. Needs a browser check.
7	Reduce photo size; view photos one by one	Done	New viewer shows one compact photo with previous/next arrows and a thumbnail strip. Used on land, air and sea detail pages.
8	Choosing the driver option switches back to self-drive	Done	Cause: the list page dropped the choice when it reloaded after a search. The choice is now kept, so the details page opens with the driver selected.
9	Popup when no driver is available	Not done	There is no driver-availability data to base a popup on.
10	Selecting Cars & SUVs does not stay selected	Needs check	Not changed. The filter reads its selection from the URL; could not reproduce by reading the code.
11	Unavailable vehicles must show as 'currently booked'	Done	When pickup and drop-off dates are searched, vehicles with an overlapping pending or confirmed booking stay in the list with a 'Currently booked' overlay.
12	Add verified and unverified	Done	Every vehicle card shows a Verified or Unverified badge based on the owning vendor's status.
13	Prices and specifications: 'bring up'	Needs check	Meaning unclear from the document (the screenshot comment). Please clarify.
14	Every item the customer adds is in the total before checkout	Already there	Checkout lists add-ons, driver fee and the grand total.
15	Advance payment and refundable deposit shown before checkout	Already there	Checkout shows the refundable deposit and advance amount.
16	Remove 'Get a quote'	Done	Button removed from the land, air and sea vehicle pages. The quote popup code is still in the files but nothing opens it.
17	Admin panel to calculate and send a quotation	Not done	A new admin workflow (request, price, send, customer reply). Needs scoping.
18	Remove age, add birthday	Done	Birthday field (18+, 21+ for rentals) replaces Age. The stored age is calculated from it.

#	Requirement (from the document)	Status	What was done / where
19	Checkout asks the customer to log in	Already there	The checkout routes require login and redirect to sign-in. No custom message was added.
20	City typed, zip code auto-fills	Done	City now has a type-ahead list of Sri Lankan cities; picking one fills the postcode. Backed by a new endpoint.
21	Customer insurance as a selectable option	Not done	No insurance step exists in the live checkout. Needs the options and prices.

Air (2 Needs check 4 Done 1 Already there)

#	Requirement (from the document)	Status	What was done / where
1	Pickup / drop-off dropdown missing; map not showing	Needs check	Not changed. Needs a browser check.
2	City dropdown with zip auto-fill	Done	Same city type-ahead and postcode auto-fill on the air checkout.
3	Remove 'Charter Flight'	Done	The 'Charter Flight / Scheduled Flight' switch is removed from the air rental page, which now shows the aircraft search directly. Scheduled flights are under Ticket Booking.
4	Selecting capacity, price per day, mileage does not stay selected	Needs check	Not changed. Needs a browser check.
5	Advance payment and refundable deposit before checkout	Already there	Shown on the air checkout summary.
6	Remove 'Get a quote'	Done	Button removed.
7	New air vehicle types (13)	Done	Private Jets, Business Aircraft, Helicopters, Charter Aircraft, Light Aircraft, Turboprop Aircraft, Seaplanes, VIP Aircraft, Air Ambulance, Tourism & Adventure, Special-Purpose Aircraft, Recreational Aircraft, Other Aircraft. In the filter, vendor add-unit form, browse tiles, categories and database. Earlier values are kept so existing vehicles still work.

Sea (4 Needs check 6 Done 1 Already there)

#	Requirement (from the document)	Status	What was done / where
1	Pickup / drop-off dropdown missing; map not showing	Needs check	Not changed. Needs a browser check.
2	City dropdown with zip auto-fill	Done	Same city type-ahead and postcode auto-fill on the sea checkout.
3	'With skipper' switches back to 'without skipper'	Done	Same cause and fix as the driver option: the skipper choice is kept when the list reloads.
4	Selecting brands, capacity, price, mileage does not stay selected	Needs check	Not changed. Needs a browser check.
5	Reduce photo size; view one by one	Done	Shared one-by-one photo viewer.
6	Prices and specifications: 'bring up'	Needs check	Meaning unclear; please clarify.
7	Remove age; add birthday and NIC number	Done	Birthday and NIC replace Age on the sea checkout. Licence number and expiry are also asked for self-drive.
8	Advance payment and refundable deposit before checkout	Already there	Shown on the sea checkout summary.
9	Remove 'Get a quote'	Done	Button removed.
10	Show the customer's selected types one by one, in order	Needs check	Meaning unclear (selected filter chips?). Please clarify.

#	Requirement (from the document)	Status	What was done / where
11	New sea vehicle types (14)	**Done**	Boats, Speedboats, Yachts, Sailboats, Catamarans, Jet Skis, Houseboats, Fishing Boats, Diving / Adventure Boats, Passenger Boats, Kayaks / Canoes, Pontoons, Luxury / VIP Boats, Other Watercraft. Same places as air. Earlier values are kept.

Files changed

- **Database (3 migrations):** NIC, birthday, licence number and expiry on the land, air and sea booking customers and on users; wider air and sea vehicle-type lists (old values kept).
- **Backend:** ClientBookingController (new fields, validation, age worked out from birthday, NIC and birthday saved on the profile), ClientVehicleController (availability and verified flags, driver/skipper choice kept, new type lists), Vendor/VehicleController, LocationLookupController (city search), config/vehicle_types.php, VehicleCategorySeeder, models.
- **Frontend:** land, air and sea checkout forms; land, air and sea search panels; air rental page; vehicle list cards and filters; vendor add-unit form; browse-by-type tiles; new shared pieces in Components/forms, Components/vehicle and constants/vehicleTypes.js.

How it was checked

- A full production build of the frontend completes without errors, and each changed page compiles.
- The three list pages were requested with and without dates: with a date range, 6 land, 6 air and 6 sea vehicles showed as booked; verified flags were returned.
- The new city search returns cities with postcodes (for example 'Col' returns Colombo with postcodes).
- Birthday, NIC and licence rules were tested: a 17-year-old, a bad NIC and an expired licence are rejected; valid values pass.
- The driver and skipper choice now comes back in the page data after a search.
- **Not tested:** clicking through the pages in a browser, completing a booking end to end, and the PHP test suite (its database settings are not separate from the dev database, so it was not run).

Open items and decisions needed

- Eleven items marked 'Needs check' are map, location dropdown and filter behaviours that cannot be judged from the code alone; they need someone to try them in a browser and say what still fails.
- Decisions needed: location-based currency; province rule for 'with driver'; admin quotation workflow; customer insurance options; the meaning of the two 'bring up' comments.
- The old quote popup code is still in the search components. It can be deleted once the client confirms the quote button stays removed.
